IMPROVEMENT OF DOOR HINGE

KS117-3-040EW
KS117-V-040EW
KS116-V-040FW
KS116-O-040FW

Before

After

1. The adjusting foot is moved forward, to improve the stability of appliance.
2. Add a door closer, to limit the opening angle to 135° , to prevent the door panel from hitting other things and being scratched in production process.

Before

After

When the door open to maximum angle, the cabinet is easy to tilt. But if we limit the opening angle to 135° , the unit is very stable.

Thank you!
